SUMMARY

Software Engineer with nearly 3 years of experience building **AI/GenAI applications, backend services, and production systems**. Hands-on experience developing **RAG pipelines, LLM applications, multi-agent workflows, and MCP-based integrations** using **Python, FastAPI, LangChain, LangGraph, and MCP**. Experienced in retrieval, embeddings, vector databases, prompt engineering, API development, and asynchronous workflows. Familiar with **AWS and Docker**, with working knowledge of Kafka and Kubernetes.

PROFESSIONAL EXPERIENCE

Software Engineer - AI Software Developer Dec 2023 - Jun 2026

RNF Technologies Pvt. Ltd.

- Designed and implemented **Conversational AI solutions** using **Dialogflow CX** and **CX Agent Flow**, building multi-step conversation journeys with **intents, entities, routes, conditional transitions, fulfillment, and fallback handling** for context-aware user interactions.
- Developed backend services and APIs using **Python, FastAPI, and REST APIs** for data-intensive applications.
- Built a production-oriented **RAG system** using **LangChain, LangGraph, Qdrant, hybrid retrieval, BM25, embeddings, and reranking** to retrieve relevant context and generate grounded LLM responses.
- Implemented **Qdrant-based vector search** for embedding storage and semantic retrieval, combined with **BM25** for hybrid dense and sparse retrieval.
- Implemented **LangGraph-based agentic workflows** for query processing, retrieval, response generation, and validation.
- Implemented semantic caching in the AI workflow, achieving approximately **40% cost reduction** in project-level experiments.

Software Engineer - Backend / AI Jul 2026 - Aug 2026

Intoglo Technologies Pvt. Ltd.

- Developed production-grade **Python and FastAPI backend services**, implementing REST APIs, business logic, request validation, CRUD operations, and error handling.
- Built and integrated backend workflows for shipment and freight-forwarding applications, including asynchronous processing and API integrations.
- Worked with **AWS SQS and AWS SES** for event-driven processing, messaging, and application communication workflows.
- Performed production debugging, API testing, logging, and root-cause analysis to improve backend reliability.
- Designed and delivered **CRUD and REST APIs** integrating backend services with MongoDB, SQL workflows, and external application components.
- Worked with **AWS SQS, AWS SES, CloudWatch, and server-side APIs** for asynchronous processing, communication, monitoring, and production workflows.
- Developed a **RAG-based document question-answering application** using Python, document processing, embeddings, retrieval, and contextual response generation.

AI / GENAI PROJECTS

AI Portfolio – RAG Resume Assistant Portfolio *Python, FastAPI, RAG, Groq, Next.js*

- Built and deployed an AI-powered **RAG resume assistant** using **Python, FastAPI, and Groq**, enabling recruiters to ask natural-language questions about experience, skills, projects, and education.
- Implemented a **retrieval pipeline** to retrieve relevant resume information and provide it as contextual input to the LLM, generating grounded responses from the candidate's data.
- Built a structured resume-processing workflow using **PyPDF, Pydantic, and LLM-based extraction** to parse and organize experience, skills, education, projects, and certifications.
- Developed the interactive **Next.js frontend** and FastAPI backend with CORS, request validation, and **rate limiting** for a production-ready recruiter-facing AI portfolio.

Multi-Agent AI Application *Python, LLMs, Tool Calling, Multi-Agent AI*

- Built a **multi-agent AI system** with a manager LLM that dynamically delegates tasks to specialized **Search and Maths agents** based on the user's query.
- Implemented **LLM tool calling** with specialized tools for web search and calculations, ensuring each agent operates within its defined capabilities and responsibilities.
- Designed an iterative **manager-worker architecture** with multi-round task delegation, where helper agents write results to a shared notes file that the manager uses as persistent workflow context.
- Implemented **token tracking, task orchestration, helper routing, tool isolation, and fallback handling** to control agent execution and reliably generate the final response.

EDUCATION

Meerut Institute of Engineering Technology 2019 - 2023

B.Tech in Computer Science / CGPA: 8.01 / 10

TECHNICAL SKILLS

Languages: Python, SQL

Generative AI **Conversational AI:** RAG, Agentic AI, Multi-Agent Systems, LLM Applications, Conversational AI, Dialogflow CX, CX Agent Flow, Prompt Engineering, Embeddings, Hybrid Retrieval, BM25, Reranking

AI Frameworks: LangChain, LangGraph, MCP, LlamaIndex, RAGAS, LangSmith

Backend: FastAPI, REST APIs, CRUD APIs, API Integration, Async Processing, Middleware, Error Handling

Databases **Vector Search:** MongoDB, MySQL, Qdrant, SQL, NoSQL, Vector Databases, Data Modeling, Query Optimization

Cloud Infrastructure: AWS Lambda, AWS EC2, AWS SQS, AWS SES, Docker

Working Knowledge: Kafka, Kubernetes
